MRC Ups The Ante Again By Upgrading Its Two Most Popular Chargers

Model Rectifier Corporation is thrilled to announce the upgrade of two of the most widely sold chargers in the USA.... The Super Brain 819 and Super Brain 959 have been kicked up a few notches with added accuracy, safety and convenience as well as smaller size and weight. And they now have new names too: **Super Brain 820 and Super Brain 960**. **Compare the specs & the prices with the competition... there is no competition!**

Central to the new look and feel of both of these AC/DC chargers is the latest internal *Switched Power Supply*, enabling both chargers to not only run significantly cooler, but both are also smaller and lighter in size for the field and flight box. For use in the field, the AC line cord is now detachable and can be left at home. MRC's, patented MicroPeak™ technology always ensures stable, safe charging, but its been "tweaked n' peaked" to ensure increased charging accuracy and safety like never before. Amp ratings are true, whether AC or DC!!

- **The Super Brain 820** is the best "stick pack", plug 'n play, entry level charger available... period! Perfect for new and seasoned R/C hobbyists, its 4.5 amp rating safely & accurately and without fuss charges twice as fast as the leading competitor. The "820" is engineered for 6-7 cell (7.2-8.4V) Sub-C or larger NiCd & NiMh batteries, 1500 Mah & above. It's MicroPeak DSP processing fine tunes accuracy precisely and makes charging a breeze. It's a great choice too, if electronic assisted starting for R/C cars are needed.
- The legendary "Purple Charger" has always been "kool", but now it's really cool too! It's the exciting... **Super Brain 960**. There's more than a name change. It's smaller and less than half the weight of the (good old) 959, thanks to its switched power supply. We more finely honed our MicroPeak technology to further increase the uncanny accuracy and safety level of "960". The control buttons have the latest "soft touch", for a better feel. The extreme reliability and ease of use remains. The Super Brain 960 charges NiCd & NiMh, 1-8 cell AA – Sub-C and larger packs plus 1.2V single cell for NiCd-starters. The big, bright LCD screen shows battery voltage, charge rate of up to 4.5 amps, adjustable peak threshold in MV, and charge time in minutes.

Super Brain 820 MSRP: \$39.00

Super Brain 960 MSRP: \$59.00

For over 60 years Model Rectifier Corporation of Edison, New Jersey has built a bold and dynamic reputation for quality products and technical achievement within the hobby industry.
