POWER MONITORS

The power monitors that are provided preclude reverse connections of the power modules. If reverse connections are made, the modules are damaged. Use of incorrect power connections will result in power failure.

TERMINALS

The main power module is provided for connection to the main power source. The connection can be made using a power cord and a power outlet. Use of incorrect power connections will result in power failure.

CONTROLS

The controls are provided for setting the desired operation parameters. The controls are designed to be easily accessible and are marked with labels for easy identification.

ELECTRICAL SPECIFICATIONS

- Voltage: 120V, 60Hz
- Amperage: 15A
- Power: 1800W
- Dimensions: 24" x 12" x 6"

TOTAL OUTPUT

- Power: 1800W
- Amperage: 15A
- Voltage: 120V

When in use, the total output is limited to 15A.
